Continuation of 11. NOTE: Applicant's arguments filed 3/4/09 have been fully considered but they are not persuasive. Applicant argues that Taniguchi et al does not teach that "at least part of the hollow fiber membrane bundles are divided into at least two, plural small bundles between the lower ring-side adhesion layer and the cartridge head-side adhesion fixation layer". However, Taniguchi et al does show that at least part of the hollow fiber membrane bundles are divided into at least two, plural small bundles (4) between the lower ring-side adhesion layer (5') and the cartridge head-side adhesion fixation layer (5) with consideration that bundles between and surrounding through hole (6) being considered a plurality of small bundles from one whole bundle (see figures 1-2, 8-9; col. 11, line 40 - col. 18, line 29). Applicant argues that the claimed arrangement has the number of bundles at the top greater than the number of bundles at the bottom if a cross-section of the cartridge of Fig. 1 from the bottom or from lower fixation layer 4 with a cross-section of the cartridge from the top or from the head-side fixation layer 5 is compared. However, such comparison of the cross-sectional views of bundles at the top and at the lower fixation layer has not been claimed
